COVID-19
PPE INTENDED USE

Medical / Surgical face masks
Loose-fitting mask used in patients or non-medical settings (Type I mask) and healthcare professionals (Type II/IIIR mask) to prevent or reduce the spread of viruses and bacteria. Single use only.

Type I
Should only be used for patients and other persons to reduce risk of spread of infection, particularly in a pandemic situation. Not to be used in operation room or similar, medical settings.

Type II
Intended for healthcare professionals in an operating room or similar medical settings.

Type IIIR
Intended for healthcare professionals in an operating room or similar medical settings.

Medical / Non-Medical respirators
Tight fitting mask filtering airborne particles used by healthcare professionals to protect against viruses and bacteria. This type of mask should be worn in settings where aerosols (solid and liquid) may be generated. Single use or re-usable.

* For more details please download the norms & terminology for masks and respirators overview.

Face shield
Facial protection for healthcare professionals against blood splash and pathogens. Single use or re-usable.

Goggles
Eye protection for healthcare professionals against blood splash and pathogens. Should be worn in settings where aerosols (solid and liquid) may be generated. Re-usable.

Coverall
Clothing to be worn to protect healthcare professionals against spray, liquid aerosols, airborne solid particulates, infective agents. Single use only.

Gloves
Protecting healthcare professionals from cross-contamination during medical examinations, diagnostic and therapeutic procedures, and handling contaminated medical materials. Single use only.

Shoe cover
The shoe cover is designed specifically for healthcare professionals in operation settings. The covers are used during operations to effectively obstruct the patient’s blood, body fluid and exudation, to prevent bacterial infection. Single use only.
