

CHOLERA KIT

KIT

INFORMATION

The cholera kits are designed to help prepare for a potential cholera outbreak and to support the first month of the initial response. Each type of kit (treatment of 100 cases) has been adapted to the specific use and needs required in various health settings during an outbreak i.e. central, peripheral and community level.

CENTRAL REFERENCE KIT

The central kit contains the necessary equipment for the initial response to a cholera outbreak, at central level within an existing health structure such as a referral hospital or an already established Cholera Treatment Center (CTC). It is adapted to any structure where patients can be hospitalised and where health care professionals are present, and equipment is available present.

The central reference kit is designed for the treatment of 100 patients: 80 severe cases, requiring IV rehydration, and 20 mild/moderate cases, who should be given oral rehydration solutions only.

It is recommended that each central reference cholera kit is combined with 3 community kits to be dispatched in the hospital surroundings, which will allow treatment at community level for the majority of patients (moderate/mild cases).

PERIPHERY KIT

The periphery kit contains the necessary equipment for the initial response to a cholera outbreak at periphery level within an existing health structure with an in-patient facility such as a cholera treatment unit (CTU) or a health center (HC).

The periphery kit is designed for the treatment of 100 patients: 40 severe cases and 60 mild/moderate cases.

It is recommended that each periphery kit is combined with at least 1 community kit.

COMMUNITY KIT

The community kit contains the necessary equipment for the initial response to a cholera outbreak at community level. Its small volume allows for rapid deployment to improve access to ORS closest to the affected population. It is adapted to all settings and should be set-up nearby an existing structure with access to latrines and clear water. It can be monitored by trained community members.

The community kit is designed to support a small place set up for an average of 40 patients maximum per day. It is subdivided into 3 modules which include medical and logistic material for the oral rehydration of 100 mild/moderate cases which can be ordered separately.

Source: World Health Organization

CHOLERA KIT CALCULATION TOOL

The World Health Organization has designed a calculation tool providing a quick and simple way to calculate the number of cholera kits and / or modules to be ordered. 

The tool can be found on the WHO emergency health kits [page](#) > Cholera kits 2020.

IDA MODULE CODES

The kits follow a modular set-up and can be ordered as complete kits or as separate modules

A040-000-02	Cholera Central Reference 1/5 Drugs module
A041-000-02	Cholera Central Reference 2/5 Renewable supply module
A042-000-02	Cholera Central Reference 3/5 Equipment module
A043-000-02	Cholera Central Reference 4/5 Logistics module
A044-000-02	Cholera Central Reference 5/5 Documents module
A045-000-02	Cholera Periphery 1/5 Drugs module
A046-000-02	Cholera Periphery 2/5 Renewable module
A047-000-02	Cholera Periphery 3/5 Equipment module
A048-000-02	Cholera Periphery 4/5 Logistics module
A049-000-02	Cholera Periphery 5/5 Documents module
A050-000-02	Cholera Community 1/3 Drugs module
A051-000-02	Cholera Community 2/3 ORP module
A052-000-02	Cholera Community 3/3 Documents module

IDA keeps stock of the cholera kits (designed according to WHO requirements) and can dispatch the kits within 48 hours in case of an emergency or disaster.
