

IDA Foundation is the supplier for the kits that are designed for the treatment of cholera patients within existing structures at the central, peripheral and community levels. Each kit is divided in several modules. The kits and modules can each be ordered separately based on customers' needs.

In an effort to better align the presentation and content of the kits to field needs, the composition of the cholera kits has been reviewed by WHO and its partners. The content of all modules have been updated and reorganised to be better adapted for field use in different settings.

The revised cholera kits are designed to help prepare for a potential cholera outbreak and to support the first month of the initial response.
